

CEPHAS – Comprehensive Customization

Automated material handling software, designed specifically for heavy industrial applications.

CEPHAS is the result of Morgan's commitment to solve our client's most complex material handling needs. While other industrial automation software is limited by application or integration, CEPHAS is as comprehensive as it is customizable.

We will configure CEPHAS to seamlessly integrate with your production flow, prioritizing the movement of materials for storage, shipment, or downstream processes based on current production needs.

Created for the fast pace of the steel industry, CEPHAS's logical algorithms can be adjusted on the fly with simple if-then statements to reprioritize movements.

One Team: One Solution

When you work with Morgan you have access to all of our expertise. Our engineers collaborate across disciplines to create the industrial automation solution that fits your specific needs.

Contact your **sales representative** or call **330-823-6130** to learn how CEPHAS can automate your operations today.
