

# CEPHAS – Industrial Automation for the Steel Industry

## 99% Uptime in the Harshest Conditions

Automating the steel industry requires electrical equipment as durable as the product it handles. We engineer our solutions so that sensors, boards, and cables withstand the repetitive, long-term handling of hot steel.

While other industrial automation solutions see this as an opportunity to sell more replacement parts, Morgan values getting the job done right—and maintaining your uptime.

Automate your critical material handling needs with CEPHAS, from Morgan Automation, for greater efficiency, safety, and uptime—for a long time.

### Choose automation that lasts.

The electrical components that make CEPHAS possible are built to last—giving you reliability when you need it most.

Contact your **sales representative** or call **330-823-6130** to learn how CEPHAS can automate your operations today.
