

Morgan Crane Management

Your Crane's Heartbeat – From a Safe Distance

Morgan Crane Management (Morgan CM™) places all of your crane's data at your fingertips—increasing safety and efficiency while reducing downtime.

Customized for each crane, Morgan CM™ monitors critical systems in real time—and will alert your operators to needed preventative maintenance.

Let your operators focus on moving with production, not learning to be crane mechanics. Morgan CM™ makes every operator a diagnostics expert, reducing onboarding time and costs for new operators.

Even when downtime isn't preventable, your maintenance team will know what needs to be fixed before they even step foot on the crane.

Increase uptime; reduce onboarding and maintenance.

Morgan CM™ monitors your crane's health in an easy-to-read graphical interface, allowing your operators to focus on production and alerting maintenance to issues before production is affected.

Contact your [sales representative](#) or call **330-823-6130** to learn how Morgan CM™ can increase your crane uptime today.
