

Not a One-For-One Replacement Part

Don't downgrade your crane.

We see replacement parts as an opportunity to innovate. When you order a replacement part for your Morgan or Alliance crane, you get the latest version, not old stock from when you first purchased your crane.

Have full confidence that your replacement part is installed to OEM standards with Morgan Site Services. Our team of technicians will install your part to factory standards, aligning the motor to work at full efficiency with your new part.

Even if you don't have drawings for a crane made by another manufacturer, our engineers can design a new, custom part to get your mill moving again.

When production is on the line, don't settle for less.

We understand production; that's why every Morgan spare is built to last, increasing uptime and lowering replacement part costs.

Contact your **sales representative** or call **330-823-6130** to order your replacement parts today.
